

Zirconia Crowns

They Shouldn't Be Able to Tell It's a Crown

Because “**natural-looking**” still gets noticed.

Most pediatric crowns are designed to look like teeth. But patients and parents **can still spot the difference.**

True success isn't resemblance. It's invisibility.

Pediatric Zirconia Crowns are engineered to blend seamlessly so restorations don't stand out... **they disappear.**

True shade integration not approximation

Full anterior to posterior coverage

Strength that protects without compromising esthetics

Designed for Primary Teeth

OPTIMAL ANATOMY

Age-appropriate morphology for a natural fit and function.

PRECISE FIT

consistent wall thickness and margins for reliable seating and results.

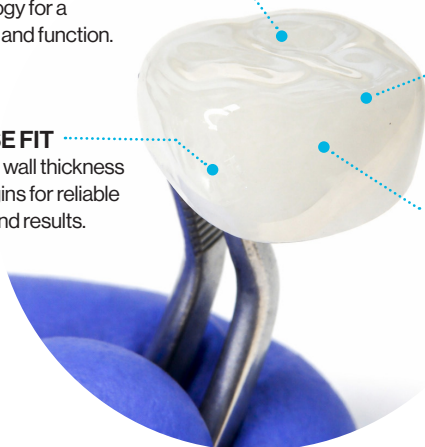

SMOOTH SURFACE

Highly polished to resist plaque and support oral health.

MULTIPLE SIZES

A comprehensive size range for every primary anterior and posterior tooth.

Why Pediatric Zirconia Crowns?

The ideal restoration for little smiles and growing confidence.

STRENGTH YOU CAN TRUST

Superior strength and fracture resistance stand up to the demands of primary molars.

BEAUTIFUL RESULTS

Tooth-colored and naturally translucent for an esthetic smile parents will love.

MADE WITH KIDS IN MIND

Smooth, polished surfaces and precise margins for comfort and healthy gums.

SAFE & BIOCOMPATIBLE

Metal-free and biocompatible for a healthy choice you can feel good about.

Zirconia delivers the performance clinicians expect and the confidence parents deserve.

Available in anterior and posterior.

Try-Ins for Predictable Results

Use our try-in crowns to evaluate fit, function and esthetics before final placement.

- ✓ Evaluate contacts and occlusion
- ✓ Confirm marginal adaptation
- ✓ Provide confidence before cementation
