

3rd Molar Kit

3RDMOLARKIT

Third Molar Readiness Goes Beyond Forceps and Elevators

One Coordinated Kit. Designed for the Full Third Molar Workflow.

Third molar procedures require more than forceps and elevators. From anesthesia delivery and surgical access to extraction, bone debridement, and closure, the 3rd Molar Kit provides a coordinated instrument setup designed to support each critical stage of the procedure.

Curated specifically for third molar surgery, the kit combines extraction, elevation, retraction, debridement, and closure instruments in one organized cassette. Adult and child mouth props provide flexibility across patient types, while the Infinity Series Oral Surgery Cassette supports efficient instrument organization.

Whether adding third molar procedures or standardizing existing surgical workflows, the 3rd Molar Kit helps practices simplify instrument selection, streamline setup, and support procedural consistency with one coordinated solution.

Procedural Coverage:

- Visualization
- Anesthesia Delivery
- Access
- Retraction
- Tissue Reflection & Extraction
- Socket Debridement
- Bone Refinement
- Closure
- Instrument Organization
