

The Hidden Challenge in Today's Implant Practices

Dental Implant Maintenance

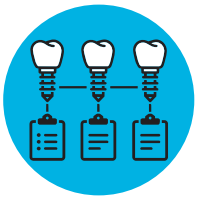

Implant success doesn't end at restoration.

As implant volume grows, so do complications.
Many practices lack a standardized implant maintenance approach.

Across dentists, implantologists, and hygienists, we consistently hear:

Implant complications are increasing

Maintenance protocols vary across practices

Patient education after restoration is limited

Common Workflow

Most clinicians still maintain implants the same way they maintain natural teeth. Treating implants like teeth increases the risk of complications and can ultimately lead to implant failure.

Modern implant care requires a maintenance approach specifically designed for implant surfaces and peri-implant tissue health.

X-ray | **Probe** | **Remove calculus** | **Polish implant crown** | **Evaluate peri-implant health**

The Real Impact:

5 million Implants placed per year

45% Implant patients experience complications 1.2 million have complications [1]

$4,234.87 Average cost of implant failure per case [2]

80% Patients who don't return after a bad experience [3]

Negative experiences also drive online reviews and word-of-mouth damage.

But what if there's a better way?

"How confident are you that your current implant maintenance approach is positioned to deliver the best long term outcomes and patient satisfaction?"

The Complete Solution for Implant Maintenance

Safe, Minimally Abrasive and Clinically Effective

Clinically Proven Biofilm Removal

PWR Air polishing with glycine powder is:

- Efficient biofilm removal supra-and subgingival
- Effective for managing peri-implant mucositis
- Supports peri-implant tissue health
- Preserves titanium implant surfaces
- 80% higher patient satisfaction[1]
- HuFriedyGroup scalers stay sharper longer in combination treatment with air polishing

Therapeutic Air Polishing combines the PWR Pair or PWR Air with PWR Perio glycine powder to effectively remove biofilm and stains supra-and subgingivally, including hard-to-reach interproximal areas.

Therapeutic Air Polishing is safe for use on all dental implants, restorative surfaces, natural teeth, and orthodontic bonding.
