

Hu-Friedy BioGent Currettes*

Maximum Hygiene Results. Maximum Tissue Respect.

FACT

Bio-type based periodontal therapy is growing in awareness amongst clinicians as focus grows around maintaining the integrity and conservation of the patient's tissue.¹⁻³ This therapy provides greater patient comfort and promotes optimal oral health.^{4,5}

CHALLENGE

Patients with thinner gingival biotypes have tissue that is more sensitive to receding and retraction after treatment in addition to altering the aesthetics of the tissue itself.^{2, 5-12} "These patients require a biotype-specific approach with instrumentation that is more respectful to the tissue."^{9, 13-15}

SOLUTION

The proprietary design of Hu-Friedy BioGent Currettes provides a more tissue-friendly approach. These instruments are slim enough to provide enhanced pocket access.

POINTS OF PERFORMANCE

Evolving periodontal therapy advancements require finishing instruments that provide

- Reduced blade width for non-traumatic and efficient access into the periodontium
- Modified bends and angulation for better adaptation
- Color coded for efficient time management
- All BioGent Currettes are designed with EverEdge® technology for super-sharp edges and efficient scaling.

*Designed by Drs. Antonella Labriola and Pierpaolo Cortellini.

SG1/29LC

Designed for all surfaces of anterior dentition

SG7/89LC

Designed for buccal and lingual surfaces of posterior dentition

SG11/129LC

Designed for mesial surfaces of posterior dentition

SG13/149LC

Designed for distal surfaces of posterior dentition
